

InkWell Health

Our InkWell Tattoo

Combined with our easy-to-use app, the InkWell temporary tattoo provides real time recovery information (temperature, swelling, range of motion) to your Clinician.

This data is used to help healthcare teams customize your recovery journey and get a better understanding of exactly how you are healing.

Your healing should happen comfortably, effectively and with full medical transparency.

We know that every patient, every body, and every recovery is different. We genuinely care about putting your recovery first; minimizing stress, optimizing recovery plans and helping you heal better.

Our InkWell App

With InkWell, our technology can help answer many of your recovery journey questions.

- How far have you come on your recovery journey?
- How much farther do you have to go?
- How is your body healing?

InkWell Health technology helps you and your Clinician understand your current condition, provides real time medical data, and helps you achieve your recovery goals.

We believe that staying informed is key to reaching your recovery goals. With our InkWell Technology, you can track your progress, avoid complications and stay connected to your care team.
